

## Narcotics Detection International Kit

A variety of Narcotics Tests arranged in various packages. This product was developed as a means of rapidly screening and presumptively identifying substances suspected of being illegal drugs. Designed to be a completely self-contained system, each test provides all necessary elements to perform chemical colorimetric tests for commonly known and frequently abused narcotics and dangerous drugs. Each test pouch is comprised of one or more chemical reagents. Suspected narcotics are placed into the pouch and then gently squeezed to crush glass vials, releasing the chemical reagent. When a predictable color or series of colors occur within a specific testing sequence, a positive confirmation may be presumed. A forensic laboratory is then required to qualitatively identify an unknown substance before a positive identification can be made. For use by fully trained law enforcement professionals only.

### Content List

- ✓ 10- 1 Marquis Reagent (Opium Alkaloids)
- ✓ 10- 1 Nitric Acid Reagent (Heroin/Morphine)
- ✓ 10-1 Dille- Koppanyi Reagent (Barbiturates)
- ✓ 10-1 Ehrlich's Reagent (LSD)
- ✓ 10- 1 Duquenois-Levine Reagent(Marijuana, Hashish, Hash Oil, THC)
- ✓ 10- 1 Scott Reagent Modified (Cocaine HCl, Crack)
- ✓ 10- 1 Methadone Reagent
- ✓ 10- 1 Special Opiates Reagent (Fentanyl, Heroin, Oxycodone)
- ✓ 10- 1 Mecke's Reagent (All Heroin)
- ✓ 10- 1 Talwin (Pentazocine) Reagent
- ✓ 10- 1 Ephedrine Reagent (Ephedrine, Psuedoephedrine)
- ✓ 10- 1 Valium, Rohypnol, Ketamine Reagent
- ✓ 10- 1 Sodium Nitroprusside Reagent (Methamphetamine, MDMA)
- ✓ Acid Neutralizer, 1 oz. (30ml)
- ✓ Black Plastic Copolymer Carrying Case; Dimensions: 12.688" x 8.938" x 3.625" (32.22cm x 22.7cm x 9.2cm); Weight: 5.2 lbs (2358 g)
